# 2022 Annual Water Quality Report (Covering period January - December 2021)

# SOUTH ALABAMA UTILITIES

PWSID# AL0000967 8100 Joy Street Citronelle, AL 36522 Phone 251-866-2365 Fax 251-866-5814

A copy of the annual CCR Report is on our website at <u>www.southalabamautilities.net</u>.

We are pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. We are pleased to report that our drinking water meets federal and state requirements.

	19 groundwater wells producing from the Pliocene-Miocene aquifer:				
	Well 1 -Jail Well	Well 13 -Eliza Jordan Well #2			
	Well 2 -U.S. Highway 45 Well	Well 14 -Fairford Well			
	Well 3 -Willie Street Well	Well 15 -Calvert Well			
	Well 4 -5 <sup>th</sup> Street Well	Well 16 -Georgetown Well			
Water Sources	Well 5 -Lott Road Well	Well 17A -Scott Plantation Well (deep)			
	Well 6 -Snow Road Well (inactive)	Well 17B -Scott Plantation Well (shallow)			
	Well 7 -Johnson Road Well	Well 18 -Coy Smith well			
	Well 8 -Wilmer Town Hall Well	Well 19 -Airport Well			
	Well 11 -Eliza Jordan Well #1	Well 20 -Calvert 43 well			
	Well 12 -Mary Montgomery Well				
Number of Customers	Approximately 20,000				
Water Treatment	Chlorination, corrosion control, and pH treatment				
Storage Capacity	13 active storage tanks, for a combined capacity of 8,648,000 gallons				
Additional Connections	Turnerville Water, McIntosh Water, and Kushla Water for emergency purposes only				
	Marcus Hobbs, Chairman	Jason Stringer, Director and Mayor			
Board Members	AI McDonald, Vice-Chairman	Jeff Smith, Director			
	Larry Yonge, Secretary-Treasurer				
General Manager	Donnie Cunningham				

### **Source Water Assessment**

In compliance with the Alabama Department of Environmental Management (ADEM), South Alabama Utilities developed a Source Water Assessment to assist in protecting our water sources. This plan includes a susceptibility analysis, which classifies potential contaminants as high, moderate, or non-susceptible to contaminating the water source. Over 75% percent of the potential contaminants sited in our assessment areas were ranked as non-susceptible and medium risk. The report was approved by ADEM. A copy of the report is available in our office for review, or you may purchase a copy upon request for a nominal reproduction fee. Please help us make this effort worthwhile by protecting our source water. Carefully follow instructions on pesticides and herbicides you use for your lawn and garden, and properly dispose of household chemicals, paints and waste oil.

### **Questions?**

If you have any questions about this report or concerning your water utility, call:

Citronelle, Fairford, & Calvert areas	Phillip Weaver	251-866-2365, ext 125
Semmes, Fairview, Wilmer, and West Mobile areas	Kevin Evans	251-649-4317, ext 215

We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second and fourth Wednesday of each month at South Alabama Utilities office located at 8100 Joy Street, Citronelle, AL at 1:00 P.M. A board meeting schedule is also available on *www.southalabamautilities.net* to check for holiday dates and times.

More information about contaminants to drinking water and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (1-800-426-4791).

### **General Information**

All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. MCL's, defined in a List of Definitions in this report, are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and radioactive material, and it can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water run-off, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, storm water run-off, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. People at risk should seek advice about drinking water from their health care providers. Based on a study conducted by ADEM with the approval of the EPA a statewide waiver for the monitoring of asbestos and dioxin was issued. Thus, monitoring for these contaminants was not required.

## Information about Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Your water system is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking.

Use *only* water from the cold-water tap for drinking, cooking, and especially for making baby formula. Hot water is likely to contain higher levels of lead. The two actions recommended above are very important to the health of your family. They will probably be effective in reducing lead levels because most of the lead in household water usually comes from the plumbing in your house, not from the local water supply. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water hotline or at <u>www.epa.gov/safewater/lead</u>.

## **Monitoring Schedule and Results**

We routinely monitor your drinking water for contaminants according to Federal and State laws. This report contains results from the most recent monitoring which was performed in accordance with the regulatory schedule.

Constituent Monitored	Date Monitored		
Inorganic Contaminants	2021		
Lead/Copper	2020		
Microbiological Contaminants	current		
Nitrates	2021		
Radioactive Contaminants	2021		
Synthetic Organic Contaminants (including pesticides and herbicides)	2021		
Volatile Organic Contaminants	2021		
Disinfection By-products	2021		
Unregulated Contaminant Monitoring Rule 4 (UCMR4)	2019		

South Alabama Utilities *routinely* monitors for constituents in your drinking water according to Federal and State laws. As you can see by the Table of Detected Drinking Water Contaminants, our system had no violations. We have learned through our monitoring and testing that some constituents have been detected. We are pleased to report that our drinking water meets or exceeds federal and state requirements.

TABLE OF DETECTED DRINKING WATER CONTAMINANTS						
Contaminants	Violation Y/N	Level Detected	Unit Msmt.	MCLG	MCL	Likely Source of Contamination
Alpha emitters	NO	Total 2.87	PCi/l	0	15	Erosion of natural deposits
Radium-228	NO	Total 1.71	PCi/l	0	5	Erosion of natural deposits
Barium	NO	0.01	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Copper	NO	0.330 * 0 > AL	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching of wood preservatives
Nitrate (as Nitrogen)	NO	ND-0.76	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
TTHM [Total trihalomethanes]	NO	Annual 18.0-56.0	ppb	0	80	By-product of drinking water chlorination
HAA5 [Total haloacetic acids]	NO	Annual 9.80-36.0	ppb	0	60	By-product of drinking water chlorination
Unregulated Contaminants	•	•	•			·
Chloroform	NO	ND-16.0	ppb	n/a	n/a	Naturally occurring or from discharge or runoff
Bromodichloromethane	NO	ND-11.0	ppb	n/a	n/a	Naturally occurring or from discharge or runoff
Chlorodibromomethane	NO	ND-19.0	ppb	n/a	n/a	Naturally occurring or from discharge or runoff
Bromoform	NO	ND-20.0	ppb	n/a	n/a	Naturally occurring or from discharge or runoff
Dibromochloromethane	NO	ND-40.0	ppb	n/a	n/a	Naturally occurring or from discharge or runoff
Dibromomethane	NO	ND-0.64	ppb	n/a	n/a	Naturally occurring or from discharge or runoff
Secondary Contaminants						
Chloride	NO	15.5	ppm	n/a	250	Naturally occurring or from discharge or runoff
Color	NO	5.0	color units	n/a	15	Naturally occurring or from water additives
Hardness	NO	3.9	ppm	n/a	n/a	Naturally occurring or from water additives
Manganese	NO	0.01	ppm	n/a	0.05	Erosion of natural deposits; leaching from pipes
pH	NO	7.7	S.U.	n/a	n/a	Naturally occurring or from water additives
Sodium	NO	39.3	ppm	n/a	n/a	Naturally occurring in the environment
Sulfate	NO	5.5	ppm	n/a	250	Naturally occurring or from discharge or runoff
Total Dissolved Solids	NO	151	ppm	n/a	500	Naturally occurring or from discharge or runoff

\* Figure shown is 90<sup>th</sup> percentile and # of sites above action level (1.3 ppm) = 0

### UCMR4

The Fourth Unregulated Contaminant Monitoring Rule (UCMR4) requires some systems to monitor for 30 unregulated contaminants during January 2018 through December 2020 on an assigned schedule. The table below shows the contaminants we were required to monitor and the results of our monitoring in 2019.

UCMR 4 Contaminants						
Contaminants	Unit Msmt	Level Detected	Contaminants	Unit Msmt	Level Detected	
Germanium	ppb	ND-0.81	Total permethrin (cis- & trans-)	ppb	ND	
Manganese	ppb	ND-42.4	Tribufos	ppb	ND	
Alpha-hexachlorocyclohexane	ppb	ND	1-butanol	ppb	ND	
Chlorpyrifos	ppb	ND	2-methoxyethanol	ppb	ND	
Dimethipin	ppb	ND	2-propen-1-ol	ppb	ND	
Ethoprop	ppb	ND	Butylated hydroxyanisole	ppb	ND	
Oxyfluorfen	ppb	ND	O-toluidine	ppb	ND	
Profenofos	ppb	ND	Quinoline	ppb	ND	
Tebuconazole	ppb	ND				
Distribution Samples		Distribution Samples				
HAA5	ppb	15.8-27.7	Total organic carbon (TOC)	ppb	ND-8620	
HAA6Br	ppb	7.70-12.4	Bromide	ppb	ND-303	
HAA9	ppb	12.5-39.1				

### **Reporting Non-compliances 2021**

The South Alabama Utilities has incurred two separate reporting non-compliances. The Volatile Organic Chemicals (VOC) noncompliance resulted from a failure to submit the April – June 2021 results by July 10, 2021. The Radiologicals non-compliance resulted from a failure to submit the October 2021 – December 2021 results for Well 5 by January 10, 2022.

South Alabama Utilities performed the sampling on time; however, a State certified analytical laboratory experienced separate challenges that caused the late reporting: 1) Lab equipment failure prevented the VOC report from being ready on time, and 2) personnel shortages due to COVID prevented the Radiological report from being submitted on time. Your water quality was not affected by either of these late reporting occurrences. All results were well within compliance levels.

ADEM Admin. Coder. 335-7-2-.20(1)(a) states, "the supplier of water shall report to the Department the results of any test, measurement or analysis within the first 10 days following the month in which the result is received or the first 10 days following the end of the required monitoring period as stipulated by the Department, whichever is shortest." South Alabama Utilities prioritizes your water quality and makes every effort to comply with water quality regulations.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail. If you have any questions about this reporting non-compliance or our monitoring requirements, please contact Phillip Weaver at our water office at 8100 Joy Street or by phone at 251-866-2365.

### Definitions

<u>Action Level</u>- the concentration of a contaminant that, if exceeded, triggers treatment or other requirements for a water system. Coliform Absent (ca)- Laboratory analysis indicates that the contaminant is not present.

Disinfection byproducts (DBPs)- are formed when disinfectants used in water treatment plants react with bromide and/or natural organic matter (i.e., decaying vegetation) present in the source water. Disinfection byproducts for which regulations have been established include trihalomethanes (TTHM), haloacetic acids (HAA5), bromate, and chlorite.

Distribution System Evaluation (IDSE)-four quarter study to identify distribution system locations with high concentrations of DBPs.

Locational Running Annual Average (LRAA)-yearly average of all the DPB results at each specific sampling site in the distribution

system. Reported as a range from lowest to highest in the Table of Detected Contaminants.

Maximum Contaminant Level- The Maximum Allowed (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal- The Goal (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health.

Maximum Residual Disinfectant Level (MRDL)-the highest level of a disinfectant allowed in drinking water

Millirems per year (mrem/yr)-measure of radiation absorbed by the body.

Nephelometric Turbidity Unit (NTU)-a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Non-Detect (ND)- laboratory analysis indicates that the constituent is not present above detection limits of lab equipment.

Not Reported (NR)-laboratory analysis, usually Secondary Contaminants, not reported by water system. EPA recommends secondary standards to water systems but does not require systems to comply.

Parts per billion (ppb) or Micrograms per liter (µg/l)-one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per million (ppm) or Milligrams per liter (mg/l)-one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per quadrillion (ppq) or Picograms per liter (picograms/I)-one part per quadrillion corresponds to one minute in 2,000,000,000 years, or a single penny in \$10,000,000,000,000.

Parts per trillion (ppt) or Nanograms per liter (nanograms/l)-one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.

Picocuries per liter (pCi/L)-picocuries per liter is a measure of the radioactivity in water.

Standard Units (S.U.)-pH of water measures the water's balances of acids and bases.

Treatment Technique (TT) - a required process to reduce a contaminant.

Variances & Exemptions (V&E) - State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Below is a Table of Primary Drinking Water Contaminants. These contaminants were not detected in your water unless they appear in the Table of Detected Contaminants.

			KING WATER CONTAMINAN			
Contaminant	MCL	Unit of Msmt	Contaminant	MCL	Unit of Msm	
Bacteriological Contaminants			trans-1,2-Dichloroethylene	100	ppb	
Total Coliform Bacteria	<5%		Dichloromethane	5	ppb	
ecal Coliform and E. coli	0	present or absent	1,2-Dichloropropane	5	ppb	
Furbidity	TT	NTU	Di (2-ethylhexyl)adipate	400	ppb	
Cryptosporidium	TT	Calculated organisms/liter	Di (2-ethylhexyl)phthalate	6	ppb	
Radiological Contaminants		organismoniter	Dinoseb	7	ppb	
Beta/photon emitters	4	mrem/yr	Dioxin [2,3,7,8-TCDD]	30	ppq	
Alpha emitters	15	pCi/l	Diquat	20	ppb	
Combined radium	5	pCi/l	Endothall	100	ppb	
Jranium	30	pCi/l	Endrin	2	ppb	
norganic Chemicals			Epichlorohydrin	TT	TT	
Intimony	6	ppb	Ethylbenzene	700	ppb	
Arsenic	10	ppb	Ethylene dibromide	50	ppt	
sbestos	7	MFL	Glyphosate	700	ppb	
Barium	2	ppm	Heptachlor	400	ppt	
Beryllium	4	ppb	Heptachlor epoxide	200	ppt	
Cadmium	5	ppb	Hexachlorobenzene	1	ppb	
Chromium	100	ppb	Hexachlorocyclopentadiene	50	ppb	
Copper	AL=1.3	ppm	Lindane	200	ppt	
Cyanide	200	ppb	Methoxychlor	40	ppb	
luoride	4	ppm	Oxamyl [Vydate]	200	ppb	
ead	AL=15	ppb	Polychlorinated biphenyls (PCBs)	0.5	ppb	
Aercury	2	ppb	Pentachlorophenol	1	ppb	
litrate	10	ppm	Picloram	500	ppb	
litrite	1	ppm	Simazine	4	ppb	
selenium	.05	ppm	Styrene	100	ppb	
hallium	.002	ppm	Tetrachloroethylene	5	ppb	
Organic Contaminants	1002	pp	Toluene	1	ppm	
.4-D	70	ppb	Toxaphene	3	ppb	
Acrylamide	π			50		
•	2		2,4,5-TP(Silvex)	.07	ppb	
Alachlor		ppb	1,2,4-Trichlorobenzene	-	ppm	
Benzene	5	ppb	1,1,1-Trichloroethane	200	ppb	
Senzo(a)pyrene [PAHs]	200	ppt	1,1,2-Trichloroethane	5	ppb	
Carbofuran	40	ppb	Trichloroethylene	5	ppb	
Carbon tetrachloride	5	ppb	Vinyl Chloride	2	ppb	
Chlordane	2	ppb	Xylenes	10	ppm	
Chlorobenzene	100	ppb	Disinfectants & Disinfection Bypro	ducts		
Dalapon	200	ppb	Chlorine	4	ppm	
Dibromochloropropane	200	ppt	Chlorine Dioxide	800	ppb	
-Dichlorobenzene	600	ppb	Chloramines	4	ppm	
-Dichlorobenzene	75	ppb	Bromate	10	ppb	
,2-Dichloroethane	5	ppb	Chlorite	1	ppm	
,1-Dichloroethylene	7	ppb	HAA5 [Total haloacetic acids]	60	ppb	
is-1,2-Dichloroethylene	70	ppb	TTHM [Total trihalomethanes]	80		
				00	ppb	
1 Dichloroproposo				Matal	chlor	
,1 – Dichloropropene	Aldicart		Chloroform	Metola		
,1,1,2-Tetrachloroethane		Sulfone	Chloromethane	Metrib	for the set of the set	
,1,2,2-Tetrachloroethane		o Sulfoxide	Dibromochloromethane		tylbenzene	
,1-Dichloroethane	Aldrin		Dibromomethane	Naphthalene		
,2,3 - Trichlorobenzene	Bromob	benzene	Dicamba	N-Prop	N-Propylbenzene	
,2,3 - Trichloropropane	Bromod	chloromethane	Dichlorodifluoromethane	O-Chlo	O-Chlorotoluene	
,2,4 - Trimethylbenzene	Bromod	lichloromethane	Dieldrin	P-Chlorotoluene		
,3 – Dichloropropane	Bromof		Hexachlorobutadiene		ropyltoluene	
,3 – Dichloropropene		nethane	Isoprpylbenzene	Propachlor		
,3,5 - Trimethylbenzene	Butach		M-Dichlorobenzene	Sec - Butylbenzene		
2,2 – Dichloropropane			Methomyl			
-Hydroxycarbofuran	Carbaryl Chloroethane		MTBE	Tert - Butylbenzene Trichlorfluoromethan
